“Every theorem has a number. If your mom
were a theorem, I would have hers.”

-Gödel

1. PEIANO AXIOMS

Take your logic, and add some arithmetic to
it. You'll need some:

2. A QUIET EVENING WITH THE MINDS OF OUR GENERATION

What **is** a proof?

A sequence of sentences which logically follow one another by the laws of deduction.

Is a proof a proof?

It's a sequence of numbers!

What kind of a proof?

One that ends with the number corresponding to the proven statement.

It's a proof!

A proof is a proof.

A good proof?

If the statement is proven.
